Day 2 - Recap.

Maturity level → Repeatable — Orchestration

① Demo: SageMaker pipelines — [Model Building pipelines]
(x end-to-end ML lifecycle)

② Lab = Automate Workflow - Step Functions

③ End-to end ML pipeline - SageMaker Projects
Templates
- Build, Test, deploy (CodeCommit)
- Org-level (CloudFormation)

Template → Deployment — Staging (Manual Approval) - Prod (Manual Approval)

Maturity level 3 → Scaling & Testing
↳ Reliable.
- How to scale ML Infra
- Multiple A/C
- various Deployment for ML Models
- Blue/green, A/B, Shadow.

Instance Type = ml.m4.xLarge
count = 4

① Endpoint Cost = hourly price of ml.m4.xlarge = (us-west-2)
X 4
X # of hours (endpoint stay Inservice)

10 hrs = (ml.m4.xlarge) X 4 X 10

30 day ——— X 4 X 24 X 30

② Training Job.
5 runs.
TRG Cost = TRG Instance hr rate X instance cost X TRG duration

③ Sagemaker Studio - Notebooks:
↳ Billed Compute → Notebook.

④ Processing / Batch / Async
↳ Billed - Instance Type.

⑤ Storage: S3 → Model Artifacts, Dataset, output

① Create SNS topic (only once) x — 1
② Subscribe Email
③ Define your feature list
- ✓ Feature store schema
- ✓ TRG dataset
- ✓ Model Monitor Baseline
