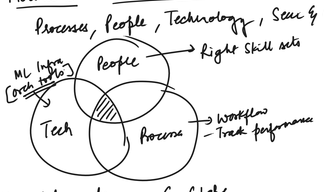
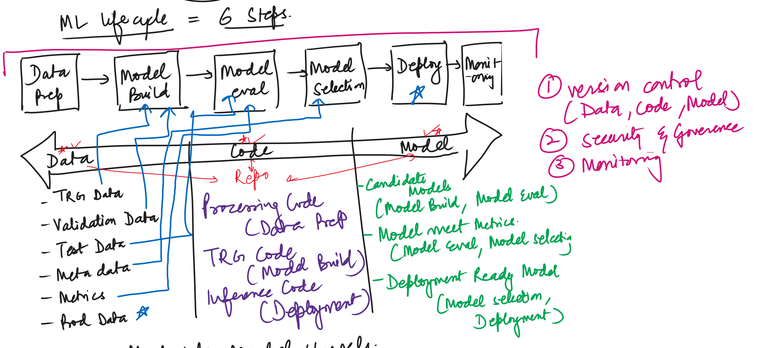
Day 1 - Recap.

Module 1 → Intro to MLOps

Processes, People, Technology, Secu & Governance



ML lifecycle = 6 Steps.



MLOps Maturity Model / Levels.

Mod = 2 ① Initial ⇒ Experiment, build, train, deploy the models. (Secure Experimentation)

* Mod = 3 ② Repeatable ⇒ * Standard repo & Automated deployment → Models 4

③ Reliable

④ Scalable

Day 2 = Agenda.

→ Build & orchestrate Repeatable ML pipelines.

① Automate ML pipelines.

→ Connect Repo into Model building pipeline.

→ Implementing Automated deployment, Data - Model - Code.

* Demo — SageMaker Projects

Module 4 - Activities.

* Demo. Using SageMaker pipelines to Orchestrate Model Building pipelines

LAB — Automate a workflow with step functions.

Demo = Standardizing an end-to-end ML pipeline with SageMaker Projects

* Demo = Human in the loop.

Demo = Exploring Security for SageMaker.

SageMaker AI Pipeline

① Processing — Data Processing + Model Eval

② TRG = Model TRG — SageMaker AI TRG Jobs

③ Conditional = Evaluate Condition & Branch next step.

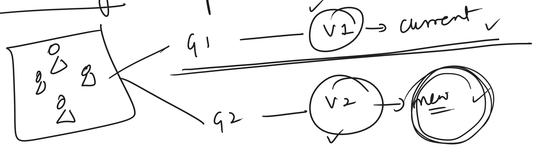
④ Register Model → Model package Resource

⑤ Create Model = Packaging the Model for deployment

⑥ Fail ⇒ Marking the pipeline — failed

Demo. SageMaker AI pipeline = orchestrate Model Building Pipeline

A/B Testing = split Testing.



Shadow ⇒ ML Models.
